TECHNICAL DETAILS

# DESCRIPTION

Medium-sized clicky momentary switches are standard input "buttons" on electronic projects. These work best in a PCB but can be used on a solderless breadboard as shown in this tutorial. The pins are normally open (disconnected) and when the button is pressed they are momentarily closed.
They come in a pack of 10, they're pretty handy so you'll want to keep them around.

You can find an EAGLE cad package for these in **switch-omron:B3F-40XX**
